***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11/26/2008 has been entered.

***Response to Arguments***

Applicant's arguments filed 11/26/2008 have been fully considered but they are not persuasive. New limitations to the independent claims do not have any support and it teaches away from the specification, in that, "without use of a digital signature" does not provide any additional support to the "the integrated circuit being configured to run a boot program that prevents unverified software from subsequently being loaded onto, or run by, the integrated circuit". Examiner requests to consider the suggestions made during the Advisory action (Mailed on 10/27/2008).

***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1, 3 and 5, 6 – 17 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Art Unit: 2436

Independent Claims 1 and 5 recite “loading ....when run on the integrated circuit, enables loading or running of unverified code on only the particular one or more integrated circuits without use of a digital signature”.

With respect to “without use of a digital signature”, although the specification discloses “performing authentication of program code and data using asymmetric (public-key) digital signatures” and “without using a QA CHIP), the specification does not disclose “enables loading or running of unverified code ....without use of digital signature”.

The dependent Claims 3, 6 – 17 are rejected by the virtue of their dependency on above rejected claims 1 and 5”.

Examiner suggests the same paragraph (see Advisory action) for amending these claims in order to overcome prior art.
